

# Management of Dental Implants in patients with COVID 19

1. Patient should rinse his/her mouth with 0.2% povidone Iodine(chlorhexidine is ineffective)
2. Take OPG radiographs as RVG may cause patient to cough
3. Procedure to be performed in Airborne Infection Isolation Room(AIIR)
4. Instruments to be sterilised and clinic to be fumigated post procedure

1. Impression to be taken cautiously
2. Impression trays and casts to be sterilised and marked for universal precaution
